Mustahid Ahmed

Last updated: September 27, 2021

Online Version

https://ahmedmustahid.github.io/html-cv

Residence

Tokyo, Japan

Nationality

Bangladesh

Git Profile

https://github.com/ahmedmustahid

Email

amustahid25@gmail.com

Professional Experience

HyperCube Ltd.

Machine Learning Engineer

April 2020 - Present

Self employed

Software Engineer

April 2020 - Present

Projects

NLP based Chatbot, HyperCube Ltd.

June 2021 - Present

Model deployment, system design and maintenance using AWS Amplify, AWS Api Gateway, AWS Lambda, AWS Sagemaker.

Front and backend development using Flutter/Dart/Swift programming languages.

```
AWS Dart/flutter Swift Docker Git
```

Database design and deployment, HyperCube Ltd.

March 2021 - May 2021

Designed MySQL database schema and deployed it in Azure.
Using web application API to connect web app with the database.

Supply Chain Optimization, HyperCube Ltd.

December 2020 - February 2021

Research on optimization problems.

Using linear programming and integer programming methodologies in Gurobi Python and C++ for supply chain optimization.

Video Anomaly Detection, HyperCube Ltd.

May 2020 - November 2020

Research on deep learning based activity detection algorithms.

Constructing and deploying algorithm to detect anomalous events in video.

Transferring the analysis data to Azure DB deployed in cloud.

Python OpenCV PyTorch MySQL Azure Docker Git

Memorize: An iOS game for training memory, Self employed

June 2021 - Present

Designing front end and game logic in Swift programming language.

Swift Git

amusta-chain: A decentralised peer to peer blockchain, Self employed

June 2021 - Present

Enabled prrof of work based dynamic mining mechanism among the peers Currently working on creating a GUI based cryptocurrency wallet application

Javascript Git

Academic Qualifications

Tohoku University Sendai, Japan

MSc. Elementary Particle Physics [2018 - 2020]

Tohoku University Sendai, Japan BSc. Physics [2014 - 2018]

Tokyo University of Foreign Studies Tokyo, Japan Associate Degree, Japanese Language [2013 - 2014]

Research/Talks

Masters Thesis: Machine Learning, Deep Learning, Data Analysis

Simulation of particle collisions and their reaction in particle detectors using C++. Desiging particle detectors using C++ framework.

Analyzing data read by particle detectors using machine learning and deep learning algorithms.

Python OpenCV PyTorch C++ Git CMake

Conference Presentation: Japan Physical Society Annual Meeting

Full Detector Simulation of Pair Monitor and Application of Machine Learning to Determine Determine Beam Size

Nagoya University, Nagoya, Japan [March '20]

Conference Presentation: International Workshop on Future Linear Colliders

Search for weakly interacting dark matter in the International Linear Collider University of Texas, Arlington, Texas, USA. [Oct '18]

Language Skills

English, Business Level, TOEFL iBT 110

Japanese: Business Level Bengali: Native Level

MOOCs

• Deep Learning Specialization: Coursera, Stanford Online

• Algorithm Specialization: Coursera, Stanford Online

• GAN Specialization: Coursera, Stanford Online

• NLP Specialization: Coursera, Stanford Online

Categories: Python C++ Algorithms Deep Learning
